ni Summer Term

t ideal for a Summer School; no factory smoke, , no evil and distracting influences; one hun- s of wooded campus, streets of elms and maples, and houses kept by cultured and educated ma- prietors.

s of Teachers. The one hundred and twenty of study have been planned with the needs of Ohio ers uppermost in thought; method and training classes for grades of teachers; common branch reviews in all subjects; anual training and art courses; advanced course in history, science, mathematics, economics and sociology, literature, foreign languages, etc.

Model School. A Model School for first four grades will be in session every day under skilled critic teachers. Methods of the class room will be put into practice in the Model School.

Intensive Courses. All courses taken in the summer term may be continued from year to year until a given course is completed, but to afford especial facilities to students to complete an entire course in the shortest possible time intensive courses are offered. Students pursuing these courses must take fewer classes, and in some cases devote their entire time to the one intensive course. One year's work may be done in beginning French, German, Spanish, in the summer term; one year's work in High School Latin, physics, chemistry, may be done in two summer terms or one Teachers' Special Term; one year of training in primary methods may be completed in one summer term.

Miss Maud Summers, *author of the Thought School Readers, editor of School Life, eminent lecturer on Primary Methods.* We take pleasure in announcing to the teachers of the state that Miss Maud Summers will be with us during the entire summer term. No one person in America has done more for the primary teacher.

Doctor Charles Hubbard Judd, *Professor of Psychology in Yale University, author of Genetic Psychology, Introduction to Psychology.* Doctor Judd is widely and favorably known in Ohio,

and the announcement of his name assures the teachers of unusual professional privileges at the Miami Summer Term.

Doctor Clifford F. Hodge, of Clark University, is well known to the Ohio teachers as the author of "Nature-study and Life," the best nature-study book for teachers that has ever been written. This book is typical of the man, who, as President G. Stanley Hall says, is "a born naturalist, and his love of nature and children, which is infectious, is not less but more because he does not forget nature's uses to man."

Single Lectures. United States School Commissioner Elmer Ellsworth Brown, Washington, D. C.; State School Commissioner Edmund A. Jones; Superintendent J. A. Shawan, Columbus; Superintendent E. B. Cox, Xenia; Superintendent F. B. Dyer, of Cincinnati; Superintendent John W. Carr, of Dayton. Others will be announced later.

Teachers' Employment Committee. Every year this committee places a large number of teachers in good positions. Teachers desiring positions or desiring to make a change in their positions should register with the committee early in the term.

Excursions. Two annual excursions a
mer term; one to Cincinnati, visiting Cary Si
Art Museum, Rookwood Pottery, etc., the ot
Cave, Kentucky. The first will be taken Ju
July 31. Both will be under special director.
